

Table of Contents

Prologue	1
Problem Solving Techniques	5
I Problems	13
1 Searching	14
1.1 Computing square roots	15
1.2 Search a sorted array for k	16
1.3 Search a sorted array for the first element larger than k	16
1.4 Search a sorted array for $A[i] = i$	16
1.5 Search an array of unknown length	16
1.6 Missing element, limited resources	16
1.7 Intersect two sorted arrays	16
1.8 Anagrams	17
1.9 Search for a pair which sums to S	17
1.10 Anonymous letter	18
1.11 Pairing users by attributes	18
1.12 Missing element	18
1.13 Robot battery capacity	18
1.14 Search for majority	19
1.15 Search for frequent items	19
1.16 Search BST for a key	20
1.17 Search BST for $x > k$	20
1.18 Searching two sorted arrays	20
1.19 Intersecting lines	20
1.20 Contained intervals	21
1.21 View from the top	21
1.22 Completion search	21
1.23 Matrix search	21
1.24 Checking simplicity	22

2	Sorting	23
2.1	Good sorting algorithms	23
2.2	TeraSort	24
2.3	Finding the winner and runner-up	24
2.4	Finding the min and max simultaneously	24
2.5	Efficient trials	24
2.6	Least distance sorting	25
2.7	Privacy and anonymization	25
2.8	Variable length sort	26
2.9	Unique elements	26
2.10	Merging sorted arrays	27
2.11	Approximate sort	27
2.12	Running averages	27
2.13	Circuit simulation	28
3	Meta-algorithms	29
3.1	Longest nondecreasing subsequence	30
3.2	Frog crossing	31
3.3	Cutting paper	32
3.4	Word breaking	32
3.5	Ties in a presidential election	32
3.6	Red or blue house majority	33
3.7	Load balancing	33
3.8	Voltage selection	34
3.9	Optimum buffer insertion	34
3.10	Triangulation	34
3.11	Maximizing expressions	35
3.12	Scheduling tutors	35
3.13	Minimize waiting time	36
3.14	Huffman coding	36
3.15	Efficient user interface	37
3.16	Packing for USPS priority mail	37
3.17	Points covering intervals	37
3.18	Rays covering arcs	38
3.19	k -clustering	38
3.20	Party planning	39
4	Algorithms on Graphs	40
4.1	Searching a maze	41
4.2	Order nodes in a binary tree by depth	42
4.3	Connectedness	42
4.4	PCB wiring	42
4.5	Extended contacts	42
4.6	Euler tour	43

4.7	Ephemeral state in a finite state machine	43
4.8	Tree diameter	43
4.9	Timing analysis	44
4.10	Team photo day—1	44
4.11	Assigning radio frequencies	44
4.12	Shortest path with fewest edges	45
4.13	Counting shortest paths	46
4.14	Random directed acyclic graph	46
4.15	Shortest paths in the presence of randomization	46
4.16	Traveling salesman with a choice	46
4.17	Road network	47
4.18	Stable assignment	47
4.19	Arbitrage	47
4.20	Birkhoff-von Neumann decomposition	47
4.21	Channel capacity	48
4.22	Team photo day—2	48
4.23	Dancing with the stars	48
4.24	2-SAT	49
4.25	Theory of equality	49
5	Algorithms on Strings	50
5.1	Find all occurrences of a substring	50
5.2	String matching with unique characters	50
5.3	Rotate a string	51
5.4	Test rotation	51
5.5	Normalize URLs	51
5.6	Longest palindrome subsequence	52
5.7	Pretty printing	52
5.8	Edit distances	52
5.9	Regular expression matching	52
6	Intractability	54
6.1	0-1 Knapsack	55
6.2	Traveling salesman in the plane	56
6.3	Facility location problem	56
6.4	Computing x^n	56
6.5	CNF-SAT	57
6.6	Scheduling	57
6.7	Hardy-Ramanujan number	57
6.8	Collatz conjecture	57
6.9	Nearest points in the plane	58
6.10	Primality checking	58
7	Parallel Computing	59

7.1	Servlet with caching	60
7.2	Thread pools	60
7.3	Asynchronous callbacks	61
7.4	Timer	61
7.5	Readers-writers	61
7.6	Readers-writers with write preference	62
7.7	Readers-writers with fairness	62
7.8	Producer-consumer queue	62
7.9	Barber shop	63
7.10	Dining philosophers	63
8	Design Problems	64
8.1	Mosaic	64
8.2	Search engine	65
8.3	IP forwarding	65
8.4	Spell checker	65
8.5	Stemming	65
8.6	Distributed throttling	66
8.7	Implement PageRank	66
8.8	Scalable priority system	66
8.9	Latency reduction	67
8.10	Online advertising system	67
8.11	Recommendation system	67
8.12	Online poker	67
8.13	Driving directions	68
8.14	ISBN cache	68
8.15	Distributing large files	68
8.16	Leader election	68
8.17	Host discovery	69
9	Discrete Mathematics	70
9.1	Computing the binomial coefficients	70
9.2	Climbing stairs	71
9.3	Ramsey theory	71
9.4	500 doors	71
9.5	Height determination	71
9.6	Betting on card colors	71
9.7	Even or odd	73
9.8	Gassing up	73
9.9	Common knowledge	73
9.10	Hershey bar	74
9.11	$n \times n$ Chomp	74
9.12	$n \times 2$ Chomp	74
9.13	$m \times n$ Chomp	74

9.14	Picking up coins—I	75
9.15	Picking up coins—II	75
9.16	Space-time intersections	75
10	Probability	76
10.1	Offline sampling	77
10.2	Reservoir sampling	77
10.3	Online sampling	78
10.4	Random permutations—1	78
10.5	Random permutations—2	78
10.6	Forming a triangle from random lengths	78
10.7	Balls and bins	78
10.8	Random permutations	79
10.9	Uniform random number generation	79
10.10	Nonuniform random number generation	79
10.11	Expected number of dice rolls	80
10.12	Option pricing—discrete case	81
10.13	Option pricing with interest	81
10.14	Option pricing—continuous case	81
10.15	Optimum bidding	81
10.16	Once or twice	82
10.17	Selecting a red card	82
10.18	Selecting the best secretary	82
10.19	Differentiating biases	82
10.20	The complexity of AND-OR formulas	83
11	Programming	84
11.1	Basic coding questions	84
11.2	Computing the parity of a long	85
11.3	Reversing the bits in a long	85
11.4	Run-length encoding	85
11.5	Permuting the elements of an array	86
11.6	Invert a permutation	86
11.7	Reverse all the words in a sentence	86
11.8	Reversing a singly linked list	86
11.9	Checking for cyclicity	87
11.10	Deletion from a singly linked list	87
11.11	Binary search	88
11.12	Programming languages	88
11.13	Debugging and testing	90
11.14	Best practices	90
11.15	Operating systems	91
11.16	Tools	91
11.17	Computer architecture	92

11.18	Systems	93
II The Interview		94
12	Strategies For A Great Interview	95
12.1	Before the interview	95
12.2	Approaching the problem	95
12.3	Presenting the solution	97
12.4	Know your interviewers	97
12.5	General conversation	98
12.6	Other grandfatherly advice	98
13	Conducting An Interview	100
13.1	Objective	100
13.2	What to ask	101
13.3	Conducting the interview	102
13.4	Scoring and reporting	102
III Solutions		104
1	Searching	105
2	Sorting	118
3	Meta-algorithms	124
4	Algorithms on Graphs	137
5	Algorithms on Strings	148
6	Intractability	152
7	Parallel Computing	159
8	Design Problems	166
9	Discrete Mathematics	177
10	Probability	184
11	Programming	195
	Index of Problems	200
